<div class="body">
<div class="left">
<h2>Problem:</h2>
<p>
Swimming is one of the best exercises that helps people to
reduce stress in this urban lifestyle. Swimming pools are found
larger in number in the hotels, weekend tourist spots and barely
people have in their house backyard. Beginners, especially often
feel it difficult to breathe under water and causes breathing
trouble which in turn cause a drowning accident. Worldwide,
drowning produces a higher rate of mortality without causing
injury to children. Children under six of their age are found to be
suffering the highest drowning mortality rates worldwide..Such
kinds of deaths account for the third cause of unplanned death
globally, with about 1.2 million cases yearly.
</p>
</div>
<div class="left">
<h2>Solution:</h2>
<p>
To overcome the conflict, a meticulous system is to be
```

implemented along the swimming pools to save the human life.

By

studying body movement patterns and connecting cameras to an artificial intelligence (AI) system we can devise an underwater pool

safety system that reduces the risk of drowning. Usually such systems can be developed by installing more than 16 cameras underwater and ceiling and analysing the video feeds to detect any anomalies . but AS a POC we make use of one camera that streams the video underwater and analyses the position of swimmers to assess the probability of drowning ,if it is higher than

an alert will be generated to attract lifeguards attention.

</p>

</div>

</div>

<div class="bottom">

<p >

Note : The system is not designed to replace a lifeguard or other human monitor, but to act as an additional tool. It helps

the lifeguard to detect the underwater situation where they can't easily observe.

</p>

</div>
